

Service and Instrumentation

Reliable measurement systems are critical to the performance of probes used for molten metal analysis. MINKON can provide instrumentation, engineering spares and service for the complete range of probes: Including instrumentation, lances, connector systems, cables and if required personnel to ensure the maximum availability of measurement performance.

- ❑ Complete range of instrumentation from hand held display units to sophisticated computer based analysis equipment.
- ❑ Lances and assemblies made specifically to order from highly engineered, robust components.
- ❑ Contact blocks, Connectors and Housings to suit all major units supplied into the industry.
- ❑ Sampling device ancillaries including suction guns, sample holders and bespoke components.
- ❑ MINKON can provide support or engage local personnel to provide a complete service to meet the demands of each specific customer.
