

Company Profile

About MINKON

Independently owned with multiple plant locations, MINKON design, develop and manufacture a complete range of advanced systems and probes for the analysis and process control of Molten Iron and Steel. Using our knowledge and experience gained over more than 50 years MINKON offer complete solutions using both established and bespoke designs to deliver the optimal solution for process control and improvements.

Focus and Philosophy

The MINKON focus is centred on technically demanding Premium Steelmakers and Foundries to supply them with best product and service both now and in the future. In recognition of the need for continuous investment for the benefit of the future of the industry, we employ a team of highly qualified engineers with access to technical institutions and partners specifically to develop new innovative technologies and product enhancements. Furthermore, we have a high proportion of trained metallurgical and technical specialists working in the field to support our products and the evermore demanding requirements of our customers to deliver continuous process improvements.

Operations and Customer Support

With multiple design and manufacturing locations MINKON have the knowhow, infrastructure, personnel, products, operational security and most importantly desire to meet the aspiration of our customers. Supported by our group wide ERP system we manage our resources to ensure the customers commercial and supply needs are managed and delivered on time every time.

MINKON's technically trained sales team form an intrinsic part of the MINKON network and are constantly mobile to ensure we serve all customers in all markets, however, we do recognise the benefits of working with partners. Whether they are sales partners in specific markets or technical partners who complement our product or service with their own to offer a complete solution, the partner is chosen carefully for their expertise, business ideal and customer orientation.

Quality

Quality is at the heart of MINKON, our operations are geared to precise industrialised manufacturing and delivery of probes, sensors and related instruments. We employ stringent processes and quality-tested materials to guarantee a superior quality product.

However, quality is not only defined by the product, but a total commitment by MINKON to the complete quality operation. At all MINKON facilities we invest continuously in Total Quality Management (TQM) and continuous improvement to ensure we maintain our philosophy of being the best at providing our customers with the solutions they require to achieve their goals. As an international multi-location company we are QS-certified in all of our production facilities to ISO-9001:2008. This is further supported by our attainment of the Quality Certificate issued by the German Steel Institute (VDEh) who are a critical part of our customer and technology base.

MINKON Technology and Scope

Extensive expendable product range

Measurement systems supply, installation and service

Application specific design and development

Product advancements and innovation

Experienced support network
